

PRZYKŁADY LEKÓW ZABRONIONYCH

Andrzej Pokrywka¹, Sylwia Lewandowska-Pachecka², Ryszard Grucza¹

¹ Zakład Badań Antydopingowych, Instytut Sportu w Warszawie

² Zakład Biochemii i Chemii Klinicznej, Wydział Farmaceutyczny, Akademia Medyczna w Warszawie

Poniżej przedstawiono przykłady leków zawierających substancje uznane za dopinujące w sporcie z podziałem na grupy oraz w układzie alfabetycznym. Tylko niewielka część z wymienionych preparatów jest zarejestrowana w Polsce. Inne dostępne są głównie w Stanach Zjednoczonych, Kanadzie, Australii, Japonii i wielu krajach europejskich. Jednak z uwagi na częste i długotrwałe wyjazdy naszych sportowców i ewentualną możliwość korzystania z opieki medycznej poza granicami Polski, zdecydowano się podać jak najwięcej przykładów, aby uczynić listę możliwie pełną. Wykaz zakazanych substancji, wchodzących w skład podanych preparatów leczniczych, zaczerpnięto z aktualnie obowiązującej „Listy zabronionej WADA”, opublikowanej przez Światową Agencję Antydopingową w marcu 2004 roku. W przypadku steroidów anaboliczno-androgennych, oprócz preparatów leczniczych, podano także przykłady preparatów zarejestrowanych jako suplementy, dostępnych w wolnym handlu.

Wśród przykładów leków są m.in. preparaty katyny* i efedryny**. WADA nie wszystkie próbki moczu, w których stwierdza się obecność katyny i/lub efedryny uznaje za pozytywne. Naruszenie przepisów antydopingowych powoduje tylko przekroczenie dopuszczalnych limitów, czyli 5 µg/ml dla katyny i 10 µg/ml dla efedryny.

Symbolem † oznaczono związki zabronione tylko u mężczyzn (dotyczy: gonadotropiny łżyskowej, gonadotropiny przysadkowej i środków antyestrogenowych).

Beta-2 agoniści, łącznie z ich D- i L- izomerami, są zabronione z wyjątkiem formoterolu, salbutamolu, salmeterolu i terbutaliny, których stosowanie jest dozwolone w postaci inhalacji i tylko do zapobiegania i/lub leczenia astmy, lub astmy wysiłkowej czy powysiłkowego zwężenia oskrzeli. Przy stosowaniu tych preparatów wymagane jest jednak zaświadczenie lekarskie, zgodnie z rozdziałem 8 Międzynarodowego Standardu Wyłączeń dla Celów Terapeutycznych (TUE; Therapeutic Use Exemptions). W opracowaniu podano tylko przykłady preparatów, które są zabronione - ze względu na postać leku (tabletki, ampułki, syropy, itp.). Analogicznie jest w przypadku glukokortykosteroidów, które są zabronione gdy są stosowane doustnie, doodbytniczo, dożylnie lub domięśniowo. Wszystkie inne sposoby podania także wymagają zaświadczenia lekarskiego, zgodnie z rozdziałem 8 TUE, a w opracowaniu podano tylko przykłady preparatów zarejestrowanych w Polsce, które są zabronione w sporcie - ze względu na postać leku.

Niniejsze opracowanie ma charakter przykładowy, a korzystanie z niego nie zwalnia sportowca od odpowiedzialności za przestrzeganie aktualnie obowiązujących przepisów antydopingowych.
